SPYDER CHECKR PHOTO

Grey Balance Card

Accurate, consistent color — **in minutes.**

Your Grey Balance Card combines a precision **18% neutral grey target** with an integrated **multi-step grayscale strip** — two tools in one card for accurate exposure, white balance, and tonal verification.

How to **use it**

THREE STEPS · ~2 MINUTES

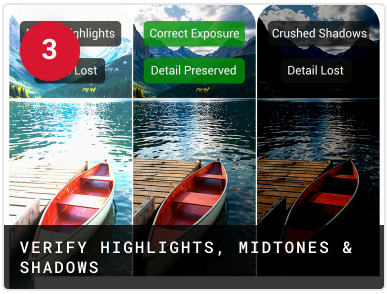

01 Set exposure & white balance

- Set your **exposure** to your desired settings.
- Place the card where your subject will be, **angled directly toward the camera** to minimize reflections.
- Set your camera to **manual white balance** and aim at the large 18% grey target area of the card.

02 Capture a reference image

- Take a **photo of the card** under your current lighting.
- This reference shot is what you'll use in post to confirm **exposure and white balance**.
- Return the card to its **protective sleeve** when done.

03 Verify in your editing software

- Open the reference image in **Lightroom, Capture One**, or your preferred editor.
- Confirm white balance using the **large grey target**.
- Use the **multi-step grayscale strip** to set white, grey, and black points — verifying tonal reproduction from highlights to shadows.

! SHORT ON TIME?

Skip in-camera setup. Fix it in post.

If you can't set white balance on set, simply **capture a reference photo of the card under your shooting conditions**. In post, use the 18% grey target and grayscale strip to dial in exposure, white balance, and tonal values — no guessing, no endless slider adjustments.

FIELD WORKFLOW

1. Shoot one frame with the card visible in your scene.
2. Continue shooting normally under the same light.
3. In post, eyedropper the grey target to balance the set.

CARD CARE

Keep your card **reading true**.

Pocket-size at 3.11" × 4.53" (79 × 115 mm). A few simple habits keep your reference surface accurate, shoot after shoot.

- ✓ Always **return the card to its protective sleeve** after use.
- × **Avoid touching the target surfaces** — oils from skin can affect accuracy.
- ✓ Store in a **cool, dry place** away from direct sunlight.

COMPLETE YOUR COLOR TOOLKIT

Spyder Checkr Photo White Balance Card

SCK3-WC1

Add fast, precise white balance using a **spectrally neutral white target**. Its high-reflectance surface eliminates color casts instantly — the perfect companion to your Grey Balance Card for full color control from capture to final output.
